A MATCH MADE IN GREENFIELD HEAVEN

Crafted for you, never pulled from a warehouse. Richly finished, in just the colors you desire.

ON THE FRONT & BACK COVERS: wall cabinets are SR Inset construction, Catalina 275 A door style, Paint Grade material, Glacier paint; base cabinets are Full Access construction, Catalina 275 A door style, Polo Blue paint by Benjamin Moore; shelves are Composite Veneer, Rift Cut White Oak, Natural finish. Design by Proud House Studio, Boulder, CO.

WONDERFUL WORLD OF WOODS

ALDER & KNOTTY ALDER

Medium density Alder has a fine flowing grain pattern and naturally warm coloration. Alder can create both charm and drama in your home, and is ideal for drier climates. Infrequent, tight knots and pin holes are a part of the natural look of Alder. Knotty Alder is also available, which has more prominent knots. (Not shown here; See your authorized Greenfield dealer for samples.)

CHERRY

A luxurious choice for your home, moderately hard Cherry features warm color variation, which mellows with age adding character and grace. Cherry will vary from a light vanilla color to deep pink in its raw state, and become more red or copper in color when exposed to light. Pin holes, mineral streaks and sapwood are a part of the natural look of Cherry.

HARD MAPLE

For a decor with minimal texture, Maple offers the beauty of a strong hardwood, featuring a more uniform appearance and tighter grain pattern. Mineral streaks are a part of the natural look of Maple, varying in size and quantity, and appearing darker when stained. Maple will gradually amber or yellow over time.

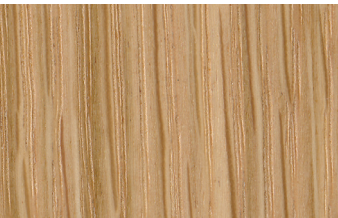

QUARTER SAWN WHITE OAK

A fairly straight grained hardwood, Quarter Sawn White Oak exhibits flecks or stripes, producing a distinctive pattern. A favorite for traditional furniture such as Mission style, Quarter Sawn White Oak ranges in color from light tan/grey to medium tan/grey and stains well in a variety of colors.

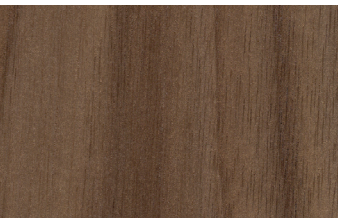

RED OAK

An enduring hardwood, Red Oak features sweeping flame-like patterns and distinctive texture. Red Oak is ideal for traditional and transitional rooms. Some darker mineral streaks are common in furniture quality Red Oak.

RIFT CUT WHITE OAK

Featuring light colored sapwood and light grey to dark brown heartwood, Rift Cut White Oak has a unique linear appearance, with a medium to coarse texture. Mineral streaks and small pin knots are part of the Rift Cut White Oak natural beauty and charm. This extremely hard wood is fitting for Craftsman and Mid Century themes.

WALNUT

An upscale hardwood used for fine furniture, Walnut has tight, curly grain ranging from an off-white in the sapwood to a dark chocolate or purplish black in the heartwood. Walnut has occasional mineral streaks and pin knots. Over the years, Walnut develops a lustrous patina.

WONDERFUL WOOD

ALDER STAINS & GLAZES

Knotty Alder is available in the same stains and glazes as Alder, and appears much the same, except with more prominent knots.

PAINT OF EVERY SHADE

PAINT GRADE PAINTS & GLAZES

Most paint colors also available on Knotty Alder.
See your authorized Greenfield dealer for samples.

A tight grained, very light colored hardwood, Paint Grade is dimensionally stable and makes a superior substrate for painted fashion finishes. Paint Grade styles may be fabricated with door center panels of Medium Density Fiberboard to better resist climate changes.

At Greenfield, we also offer a Benjamin Moore and Sherwin Williams designer paint match option. We will match the current fan color of your choice for a modest investment. Speak to your authorized Greenfield designer to learn more about this very popular program.

COMPOSITE VENEERS

Composite Veneers are high quality, re-engineered wood products made from fast-growing trees, harvested from environmentally managed forests and supplemented with Poplar. Natural Veneers are created from slices of wood, showcasing variations of weather, soil content and growing seasons of the natural habitat.

ACRYLICS

High gloss Acrylic material is a Medium Density Fibercore substrate, with a permanently fused Acrylic outer layer. Acrylic material is scratch resistant, not scratch proof.

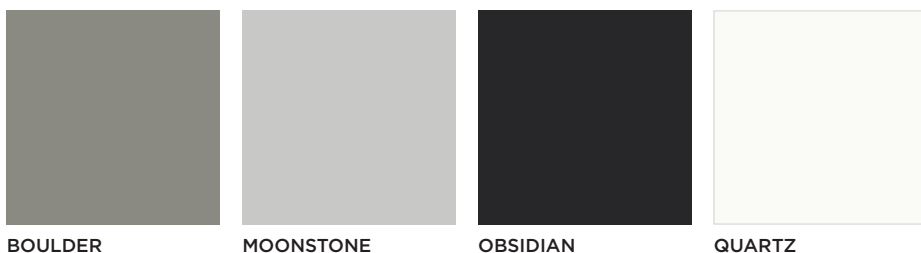

2D LAMINATES

High gloss wired 2D Laminate is a PVC (polyvinyl chloride) material. Like Acrylic material, 2D Laminate is scratch resistant, not scratch proof.

FENIX NTM

FENIX NTM is an innovative material created for interior design applications by Arpa Industriale. The external surface of FENIX NTM involves the use of nanotechnology and it is characterized by next generation acrylic resins, hardened and fixed with an Electron Beam Curing process. With low light reflectivity, its surface is extremely opaque, anti-fingerprint and features a very pleasant soft touch. It also features enhanced anti-bacterial properties, and is resistant to dry heat, scratches and dents.

FRAMED INSET CHOICES

Considered a premium look, Inset construction features the cabinet doors and drawer fronts set inside the front frame, creating a flush, handcrafted appearance. Greenfield Cabinetry offers four different Inset choices.

BEADED INSET

COVENTRY INSET

ER INSET

SR INSET

SPECIALTY

ASHBOURNE 231 B
Paint Grade, Eucalyptus, Brown Glaze.

GLAZED. Glaze is an artistic hand applied translucent color that, unlike a stain, forms a layer atop a paint or stain. It lends an additional depth and detail to the finish. Glaze not only changes the overall color but will also hang up in available details to add drama and visual depth.

The amount of Glaze hang up will vary greatly depending on the selection of door style. Styles with profiles and panels that have right angle cuts or details on grooves will show more Glaze than smooth, curved surfaces. Styles with applied moldings also increase the amount of Glaze detail that will remain.

Glaze is applied to all exterior finished components and loose items such as turnings, moldings and wainscot. Indicated finished interiors will also be glazed. Backs of doors are a complementary color/finish to the front.

LEIGHTON A
Rift Cut White Oak, Barnwood, Limed,
SR Inset.

LIMED. Liming, or more correctly, ceruse is a classic finish method used to enhance the natural grain characteristics of wood. In the distant past, the technique used actual lime as a colorant. Today the products are very safe and can be adjusted to colors in addition to white. We offer Liming on Rift Cut White Oak and on Quarter Sawn White Oak.

We magnify the Liming effect by hand scrubbing the wood with metal bristle brushes prior to application; working the brush parallel to the grain to avoid cross scratches. As with many finish treatments, the end result will vary dependent on the structure and specie of the wood.

JACKSON A
Glacier, Brown Glaze, Combed.

COMBED. Combing is actually a form of Glaze application; but instead of the Glaze being wiped off smoothly, it is hand brushed or scuffed off in a way which leaves visual striations or a Combing effect. A classic finish, Combing has been used for centuries to soften or accent surfaces with subtle nuances of color. Combing is an art form, and as such, it will be irregular and show the hand of the artist. It is this inconsistency that brings added depth and warmth to the finish.

All finished surfaces will include the Combing treatment with the exception of door backs, which will be color blended. Combing is available with Black, Brown and Grey Glazes. A Matte sheen is recommended as Combing is meant to create a vintage appearance.

FINISHES

ROCKPORT 231 F
Paint Grade, Slate, Black Glaze,
Weathered & Worn, SR Inset.

WEATHERED + WORN. Weathered + Worn are actually two unique treatments that work hand-in-hand. They are always used together.

Weathered is the sanding off or softening of corners of doors and drawer fronts. This Weathering effect will also be applied to select loose items such as turnings, wainscot, filler overlays, light aprons and more. Interior elements behind doors, solid or glass, will not be treated. Finish color is applied after and over the Weathering process.

Worn is the over-sanding of profile edges of doors and drawer fronts with sanding emphasis on the Weathered portions. This over-sanding exposes the raw colored base wood creating a two-toned effect. Treated elements will include turnings, wainscot, filler overlays, select moldings and more. Interior elements behind either solid or glass doors will not be treated. If a Glaze is selected, it will be applied after the over-sanding, so it will alter the appearance of the base color and the raw wood that has been exposed. Weathered + Worn may be used with all stains, stains with Glaze, paints & paints with Glaze.

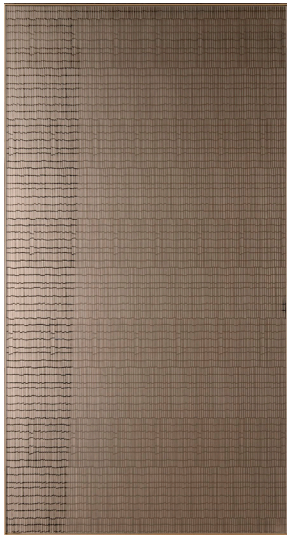

CONCORD A
Knotty Alder, Latte, Brown Glaze,
Heaving Distressing.

HEAVY DISTRESSING. Heavy Distressing is a very bold application of physical alterations to the exterior of the cabinetry, including bird pecks, dents, faux cracks, spatter and edge rasping. Our Heavy Distressing package includes Weathered + Worn.

Heavy Distressing may be ordered with stains, stains with a Glaze, paints or paints with a Glaze. Distressing is available on all our wood species. Heavy Distressing will also be applied to select loose items such as turnings, wainscot, filler overlays, select moldings and more. All exterior components of a project are equally treated. Interior elements behind either solid or glass doors will not be treated. Heavy Distressing is performed before the final color process; therefore, Distressed areas will appear darker than the overall background finish.

Our cabinets are proudly made in West Virginia and Indiana.

Greenfield cabinetmakers have that special blend of old world attention to detail, combined with modern technical expertise. It's the best of both worlds.

For full room images, visit our Room Gallery at [Greenfieldcabinetry.com](https://www.Greenfieldcabinetry.com).

To avoid dimensional changes in or damage to components of finished wood cabinetry, we recommend maintaining your environment between 25% and 50% relative humidity and a temperature range of 40 to 100 degrees.
